

## Desktop App on 2 computers, for 1 Extension

*Note: Both desktop apps cannot ring simultaneously. You would need 2 extensions, both with their own desktop app, in a hunt group for this.*

1. Simply set 1 desktop app to “Online” while the other app is set to “Offline”
2. Completely close both apps (force quit)
3. Re-open the app on the device you wish to use  
(should have been set to “Online” upon closing)

- You should see the start-up screen shown below
- If the app opens immediately without showing the start-up screen, it was not fully closed  
(research how to force quit an application)

Calls will come to the desktop app you just opened
